

Shock figures show almost 200 construction workers killed since 2013

05 Nov 2019

No one should go to work not knowing if they are going to make it through the day unharmed – or even alive says GMB Union

Almost 200 construction workers have been killed and more than 26,000 seriously injured at work in recent years, shocking statistics reveal.

A total of 195 people have been killed doing construction work since 2013, official figures show.

Causes of death include falls, electrocution, explosions, drowning and asphyxiation.

A further 26,007 have suffered injuries such as fractures, amputations, serious burns and loss of consciousness.

Between 2010 and 2020, the Conservative led Government will have cut funding and resources from the Health and Safety Executive by £100 million.

The Building for Britain Pledge

The figures emerge at GMB's National Manufacturing Conference in Belfast today [Tuesday November 5, 2019].

Delegates will sign GMB's new 'Building for Britain' charter aimed at tackling health and safety in the construction industry -among other issues facing the profession.

Jude Brimble, GMB National Secretary, said:

“No one should go to work not knowing if they are going to make it through the day unharmed – or even alive.

“Construction work is highly skilled and can be dangerous, but these figures are absolutely unacceptable.

“Boris Johnson may think health and safety campaigners are the 'Royal Society for the Extremely Stupid' - but these are people's lives we are talking about.

“That's why we will be discussing our Building for Britain pledge at GMB's manufacturing conference today - to tackle these issues and make construction industry and safer, more inclusive place to work.”
